

ARTIFICIAL INTELLIGENCE AND DATA ACT (AIDA) – Core Requirements (Sections 6-12)

Section 6: A person who is responsible for a high-impact artificial intelligence system must establish measures to identify, assess and mitigate the risks of harm or biased output that could result from the use of the system.

Section 7: The measures must be proportional to the severity and likelihood of harm, and take into account the context of the system's use.

Section 8: The person must monitor compliance with the measures and update them as necessary.

Section 9: The person must keep records describing the measures and the reasons for assessing the system as high-impact.

Section 10: Records must be kept in accordance with regulations, including anonymization measures.

Section 11: A person who makes available a high-impact system must publish a plain-language description explaining how the system is intended to be used, the types of content it generates, and the mitigation measures established.

Section 12: If the use of a high-impact system results or is likely to result in material harm, the person must notify the Minister as soon as feasible.

Definitions:

- "biased output" means content or a decision that adversely differentiates on prohibited grounds under the Canadian Human Rights Act.
- "high-impact system" is defined by regulation based on potential harm.
- "material harm" includes physical, psychological, or economic harm.

These sections are the core of AIDA for AI governance compliance.
